

PRESS RELEASE

May 13th 2011

Just after 1:00 pm today, the Cayman Islands Fire Department responded to an alarm arising from smoke emanating from a small oil leak in a temporary leased mobile generating unit located at CUC's Power Plant on North Sound Road adjacent to Sparky Drive. However, the smoke died down before the responders arrived on the site.

This minor incident has not affected the Company's generation capacity and the unit should be back in service in a few days following inspection.

There was no injury to any of our personnel or damage to any other equipment. There were no outages as a result of the excessive smoke.
