

Warning

Tampering with Utility Poles

CUC reminds the public not to tamper with any equipment attached to its utility poles or transmission lines. This includes the yellow guy wire guards located at the base of the guy wires (pole stabilizers). These guards have been specifically placed there to identify the guy wires and guy rods. On a number of occasions, members of the public have tampered with these guards and when clearing land, certain operators have loosened these guy wires from the guy rods causing transmission lines on the utility pole to become slack. This is a dangerous practice which could result in service interruption or more importantly, injury to the public.

Only authorised CUC employees and contractors are permitted to install, remove or otherwise work on the Company's utility poles.

If you have any queries, please contact our Customer Service Team at **949-5200** or via e-mail at service@cuc.ky.

The Environmental Management System at the North Sound Road Power Plant is registered to ISO 14001
